

CLAIMS

What is Claimed is:

1. A gasket removal and cleaning tool comprising, in combination:

an elongate rod having a rotational drive end and an active abrasive attachment end,

an abrasive disk attached to the abrasive attachment end;

a hollow sleeve mounted on the elongate rod, said hollow sleeve extending longitudinally for a portion along the length of the rod, said rod freely rotational in the sleeve with said disk extending from one end and the drive end of the rod from the opposite end; and

a retention mechanism for maintaining the sleeve on the rod with the drive end of the rod accessible to rotationally drive the rod and attached disk.
2. The tool of Claim 1 wherein the rod defines a longitudinal axis, and the disk comprises an abrasive pad normal to the axis.
3. The tool of claim 1 wherein the sleeve retention mechanism includes a counterbore at the drive rod end, and a retainer flange on the rod in the counterbore.
